SUMMARY

Product manager with product development and consulting experience across 7 years in AI and operations products, four of them at an enterprise agentic AI platform delivering 50+ client engagements in Europe, North America and GCC. Financial services has been the deepest vertical, spanning production agents for collections and recovery, receivables and payment reconciliation, and AR/AP automation integrated into client SAP and NetSuite systems. Each engagement has run end to end — discovery and journey-mapping workshops, solution design, phased delivery, then enablement and adoption with the client's own team — holding 100% on-time delivery across 10+ enterprise programmes and adoption ~15% above target in the first 90 days. The work rarely stops at building or infusing AI, and has covered what makes it hold: evaluation and guardrail frameworks that keep quality measurable and defensible, in-product onboarding, and playbooks the client team keeps using after handover.

EXPERIENCE

AutoLeap

Apr 2026 – Present

Group Product Manager — AI Products

Vertical SaaS for the automotive aftermarket, ~3,000 repair shops across North America.

- Lead AI product across 3 surfaces — CRM, appointment booking and third-party parts ordering — working with 3 product managers and 2 designers alongside engineering across how the next AI enabled evolution impacts each ambit,
- Took a conversational execution layer from kickoff to beta in 4 weeks, covering 5 shop workflows in natural language: appointment booking, repair order creation and editing, parts lookup and campaign creation. Live with 50 shops, completing those tasks ~10% faster than through the existing UI.
- Recovered an underperforming AI receptionist post-launch — rebuilt the intent set against a sample of real production calls and moved recognition accuracy from ~70% to the mid-80s, widening the range of calls handled without a human.
- Run the 50-shop beta directly — success criteria, go-wide gates and a weekly read on where shops fall out of the flow. What comes back from the field sets production scope, not the original spec.

Beam AI

Dec 2022 – Apr 2026

Senior Product Manager — Agentic AI

Enterprise agentic AI platform. 50+ enterprise clients across Europe, North America and the GCC. Reported to the CEO.

- Embedded as the product lead on client engagements across 50+ enterprise deployments in 3 regions and 3 domains — finance, HR and customer service — with financial services the deepest vertical. Ran the discovery and journey-mapping workshops, turned the output into roadmap, then stayed through rollout and adoption.
- Built and deployed collections agents for a debt-recovery business, routing accounts across 3 recovery paths with path-specific agents at ~85% routing accuracy. Over the first 3 months of full rollout, average monthly amount collected rose 4% and customer response rate rose 10% — contact rate being the binding constraint on everything downstream in recovery.
- Shipped recovery and reconciliation agents for B2B SaaS and consumer fintech clients, including a US wealth platform (Betterment). Automated exception detection cut false positives ~10% against the manual baseline, reducing recheck hours and improving recovery on aged balances.
- Set the confidence policy governing what the platform ran autonomously, what it escalated to a human, and what it never touched, with human-in-the-loop fallback on low-confidence routes across 50+ agent graphs — the control layer that makes automation defensible in a complaints-sensitive process.
- Productised a 4-pillar LLM evaluation framework — LLM-as-judge, golden set comparison, human rubric scoring and hallucination detection — to make agent quality measurable when outputs are not deterministic. Shipped as customer-facing capability and reused as a quality gate across engagements; agent efficiency rose ~22%.
- Cut per-execution platform cost ~50% by instrumenting the orchestration graph and stripping out LLM calls that were not changing the output, then argued for passing most of it through as a ~40% price cut rather than banking the margin. The cost-to-serve method became a repeatable account-level exercise.
- Built a 0-to-1 agentic hiring solution end to end — prototyped the interface, then put agentic candidate screening and JD intake behind it — and took it to \$500K+ in signed contracts with enterprise staffing and talent-services clients in ~4 months.
- Designed a two-tier agent memory architecture (task-scoped state, RAG-backed memory for long-document grounding), owning retrieval, chunking and eval coverage, leading to agent context handling improving by over 30%.
- Grew and led a 2-PM team plus a 7-person squad (solution architect, designer, 2 front-end, back-end, ML), setting the standards for discovery and acceptance criteria, and ran bi-weekly roadmap and business reviews with the CEO, CTO and CPO.
- Ran an AI adoption programme across 5 functions of a ~50-person org via reusable workflows, live sessions and written playbooks, reaching ~80% daily usage.

Swvl

Feb 2022 – Nov 2022

Program Manager — Global Operations Tech and Experience

Mass transit and ride-hailing across Pakistan, Egypt and the UAE. NASDAQ-listed at the time.

- Delivered a real-time fleet optimisation platform 0-to-1 across 3 markets from requirements discovery through rollout — dispatch, scheduling and performance views for ops teams running 5,000+ rides a day — lifting operational efficiency ~30% and cutting scheduling time 60%.
- Owned the driver bonus and deduction policy across all 3 markets: a single incentive lever that had to serve supply quality, in-app adoption and cost per ride at once, and survive 3 sets of local ops leadership who each wanted it tuned differently.
- Rode shifts with drivers and shadowed control-room dispatchers before designing anything. The finding that demand-side participation was the missing lever drove a mid-launch scope change worth ~15% efficiency on top of the original design.
- Ran structured pilots with risk registers and go/no-go gates, mitigating 95% of identified risks pre-launch.

Daraz, Alibaba Group

Oct 2020 – Feb 2022

Product Manager — Customer and Seller Experience

South Asia's largest e-commerce marketplace.

- Owned seller onboarding. Automated the manual steps and ran the team training rollout behind it, cutting onboarding time ~35%.
- Ran discovery on listing localisation across 100,000+ SKUs, driving ~7% order uplift and ~5% GMV growth over 6 months.
- Shipped seller visibility and merchant ranking surfaces through a 3-tier approval structure — local Pakistan, regional South Asia, Alibaba Group HQ — lifting top-seller visibility ~20%. A good share of that job was managing the people who could say no without losing the delivery date.

Khaadi

Jul 2019 – Oct 2020

Management Trainee — E-commerce and Product

- Worked across e-commerce and store operations on fulfilment and stock, cutting fulfilment delays ~35%, raising order accuracy to 98% and freeing \$10K+ in carrying cost by clearing slow-moving lines earlier.

SKILLS

Financial services: Collections and recovery workflows, receivables and payment reconciliation, AR/AP automation, credit and risk agent design, SAP and NetSuite finance integration

AI and agentic products: Agent design and orchestration, LLM evaluation and benchmarking, guardrails and human-in-the-loop, hallucination controls, two-tier agent memory, intent classification and routing, conversational UX, prompt engineering, model selection and trade-offs

Consulting and delivery: Design-thinking and discovery workshops, solution design and scoping, multi-phase delivery governance, pilot and rollout management, change management and enablement, business case and ROI modelling, pricing and unit economics, C-level and client stakeholder management, Agile delivery, PMP certified

Product: Continuous discovery and user research, 0-to-1 product, OKRs, roadmap and prioritisation, A/B testing and experiment design, PRDs and acceptance criteria, PM hiring and coaching

Technical: SQL, Mixpanel, Power BI, REST APIs and webhooks, MCP servers, n8n, Make, Zapier, Jira, Linear, Notion

Prototyping: Claude Code, v0, Lovable, Replit, ElevenLabs — clickable prototypes before design hand-off

Domains: Financial services and lending, debt recovery and collections, HR and talent services, customer service and BPO, retail and e-commerce, mobility and logistics.

EDUCATION AND CERTIFICATIONS

Master of Business Administration — Institute of Business Administration, Karachi

Jul 2021 – Dec 2023

Bachelor of Business Administration — Institute of Business Administration, Karachi

Aug 2015 – May 2019

Project Management Professional (PMP) — Project Management Institute

2024

Languages: English and Urdu (native/bilingual), Arabic (conversational)
